

Here's my favorite way to implement **real-time UI updates**

(with  **RAILS** and  **SVELTE**)

Let's assume we have a boring Svelte page

```
<script>
  const {
    notifications
  } = $props()
</script>

<ul>
  {#each notifications as notification}
    <li>{notification}</li>
  {/each}
</ul>
```
